

Fresnel Equations

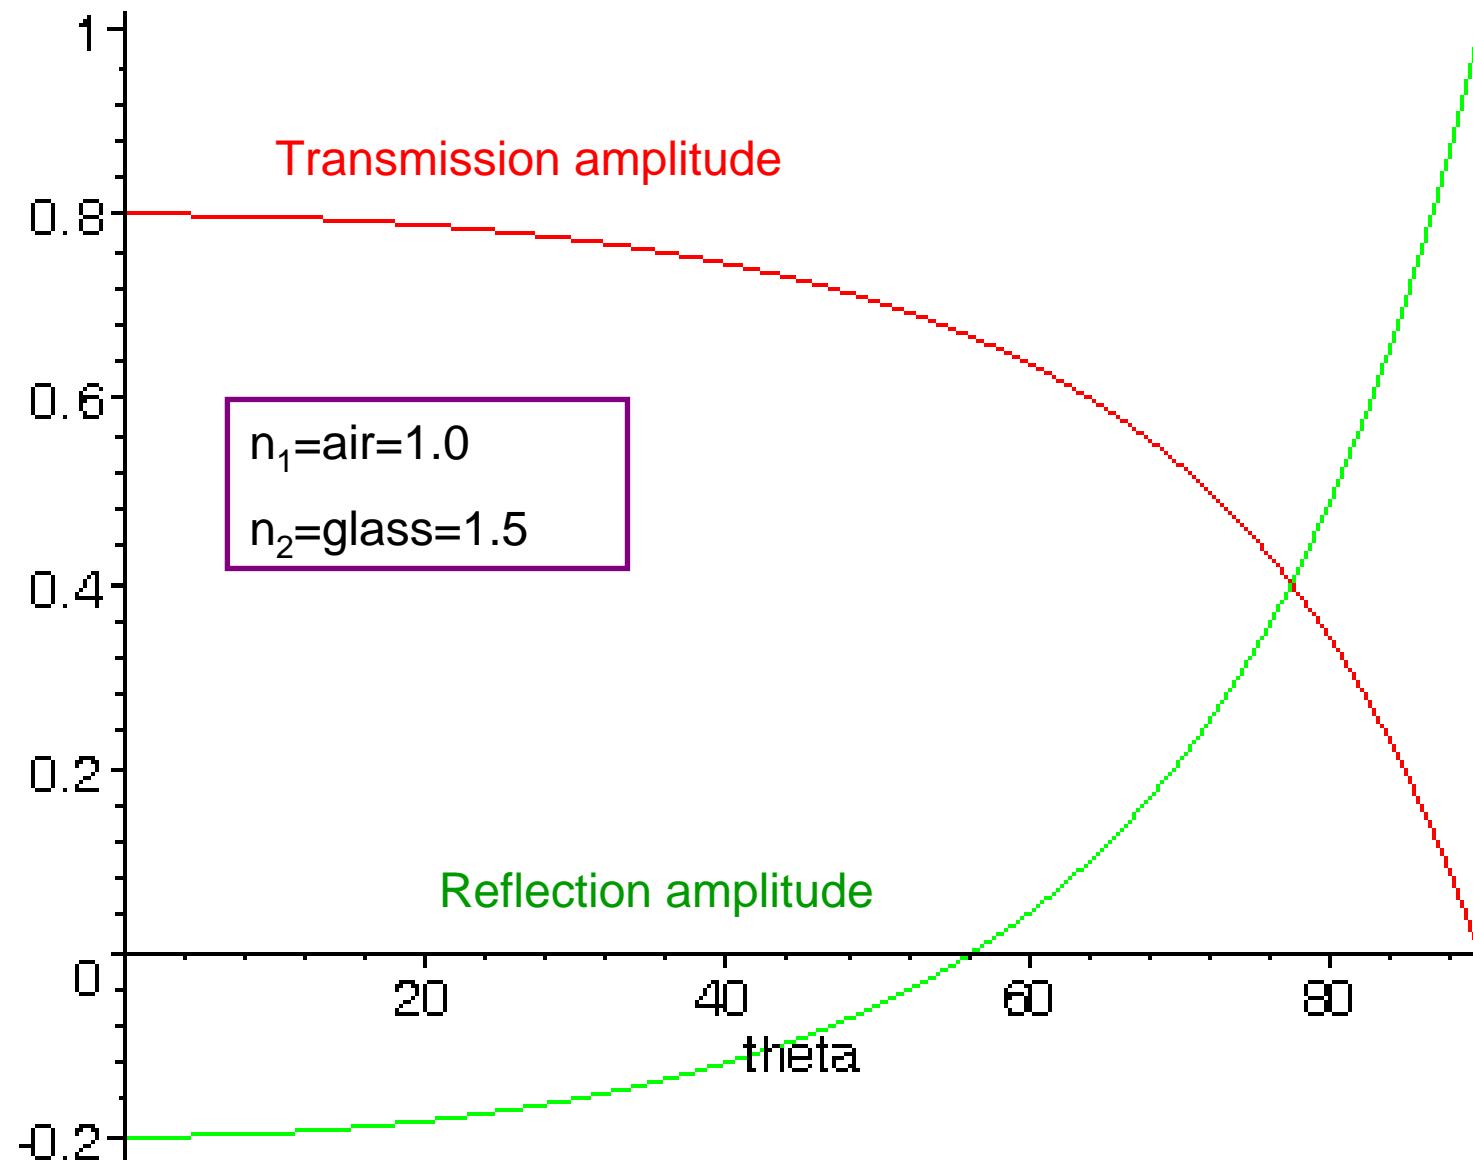

Transmission Amplitude:

$$t = \frac{2}{\sqrt{1 - \left(\frac{n_1}{n_2}\right)^2 \sin^2 \theta_i} + \frac{n_2}{\cos \theta_i} \frac{n_1}{n_1}}$$

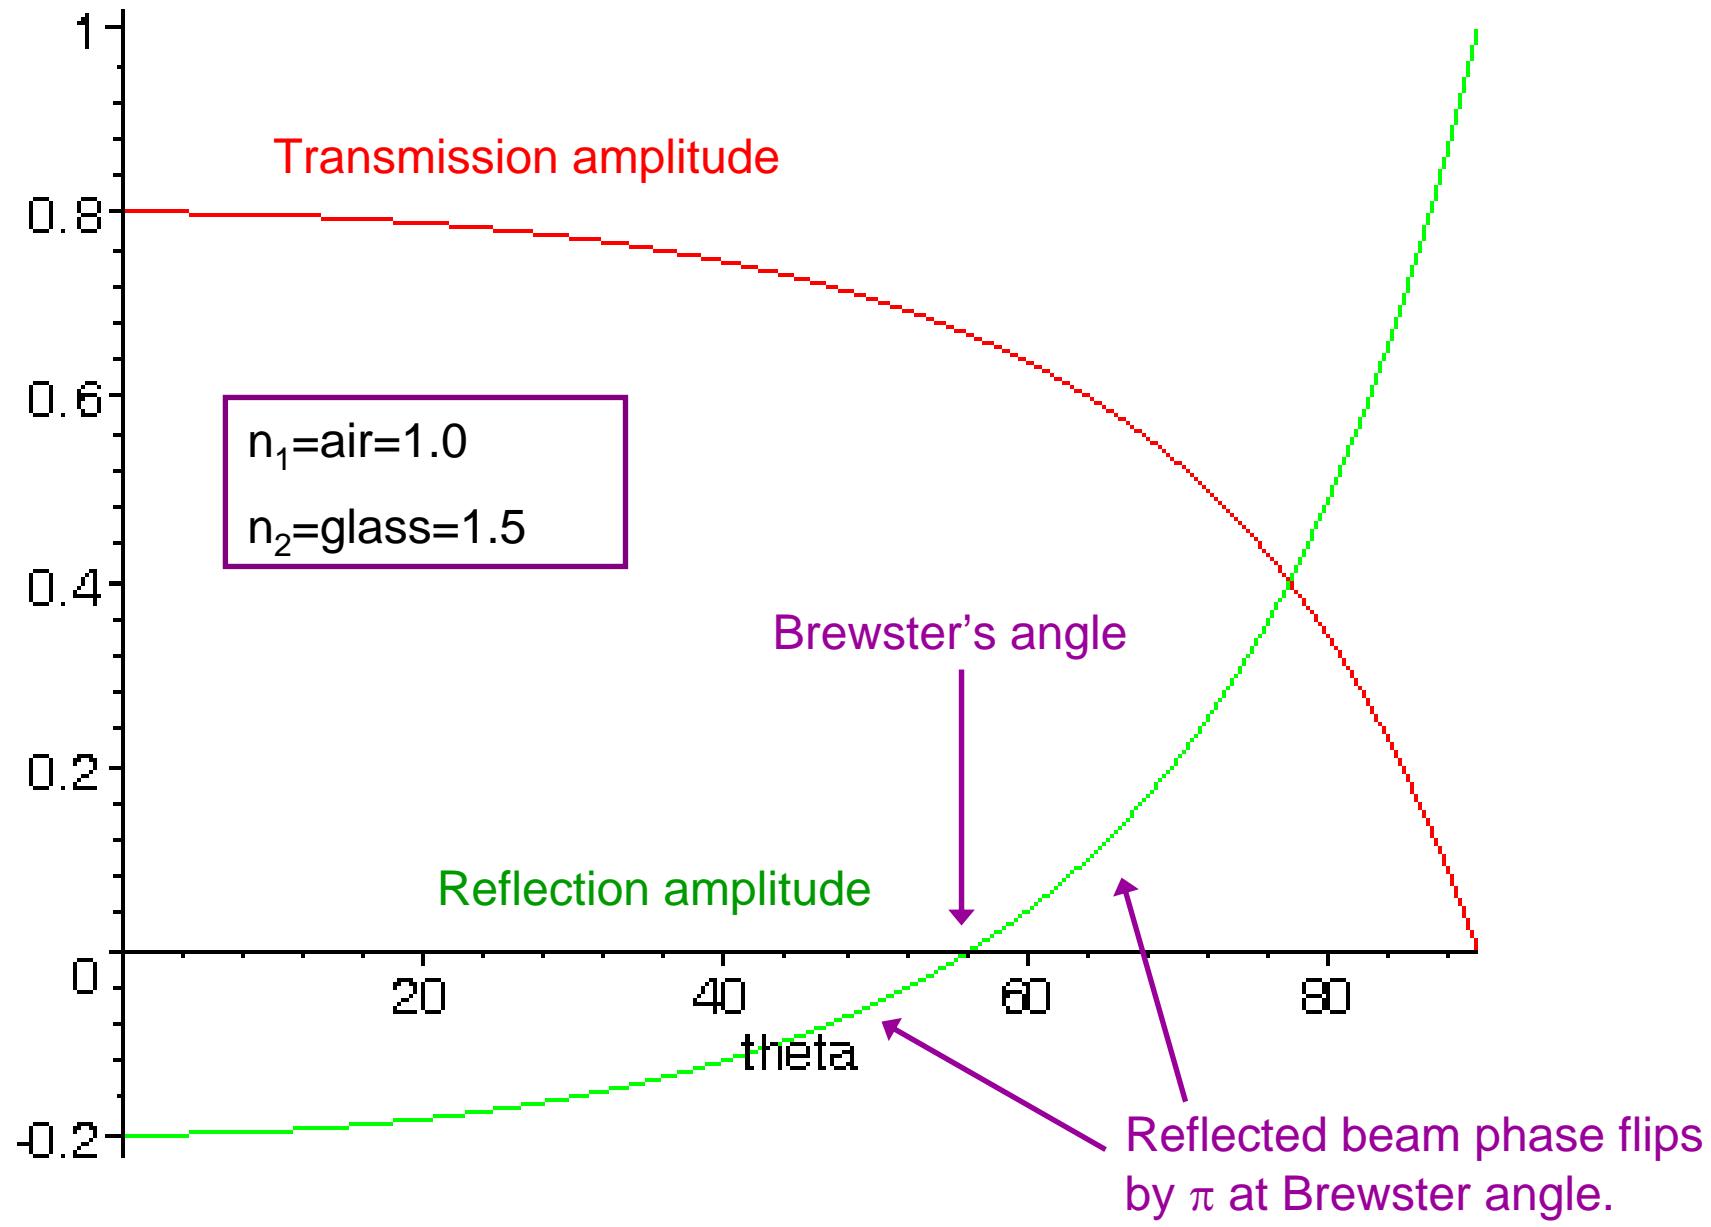

Reflection Amplitude:

$$r = \frac{\sqrt{1 - \left(\frac{n_1}{n_2}\right)^2 \sin^2 \theta_i} - \frac{n_2}{\cos \theta_i} \frac{n_1}{n_1}}{\sqrt{1 - \left(\frac{n_1}{n_2}\right)^2 \sin^2 \theta_i} + \frac{n_2}{\cos \theta_i} \frac{n_1}{n_1}}$$

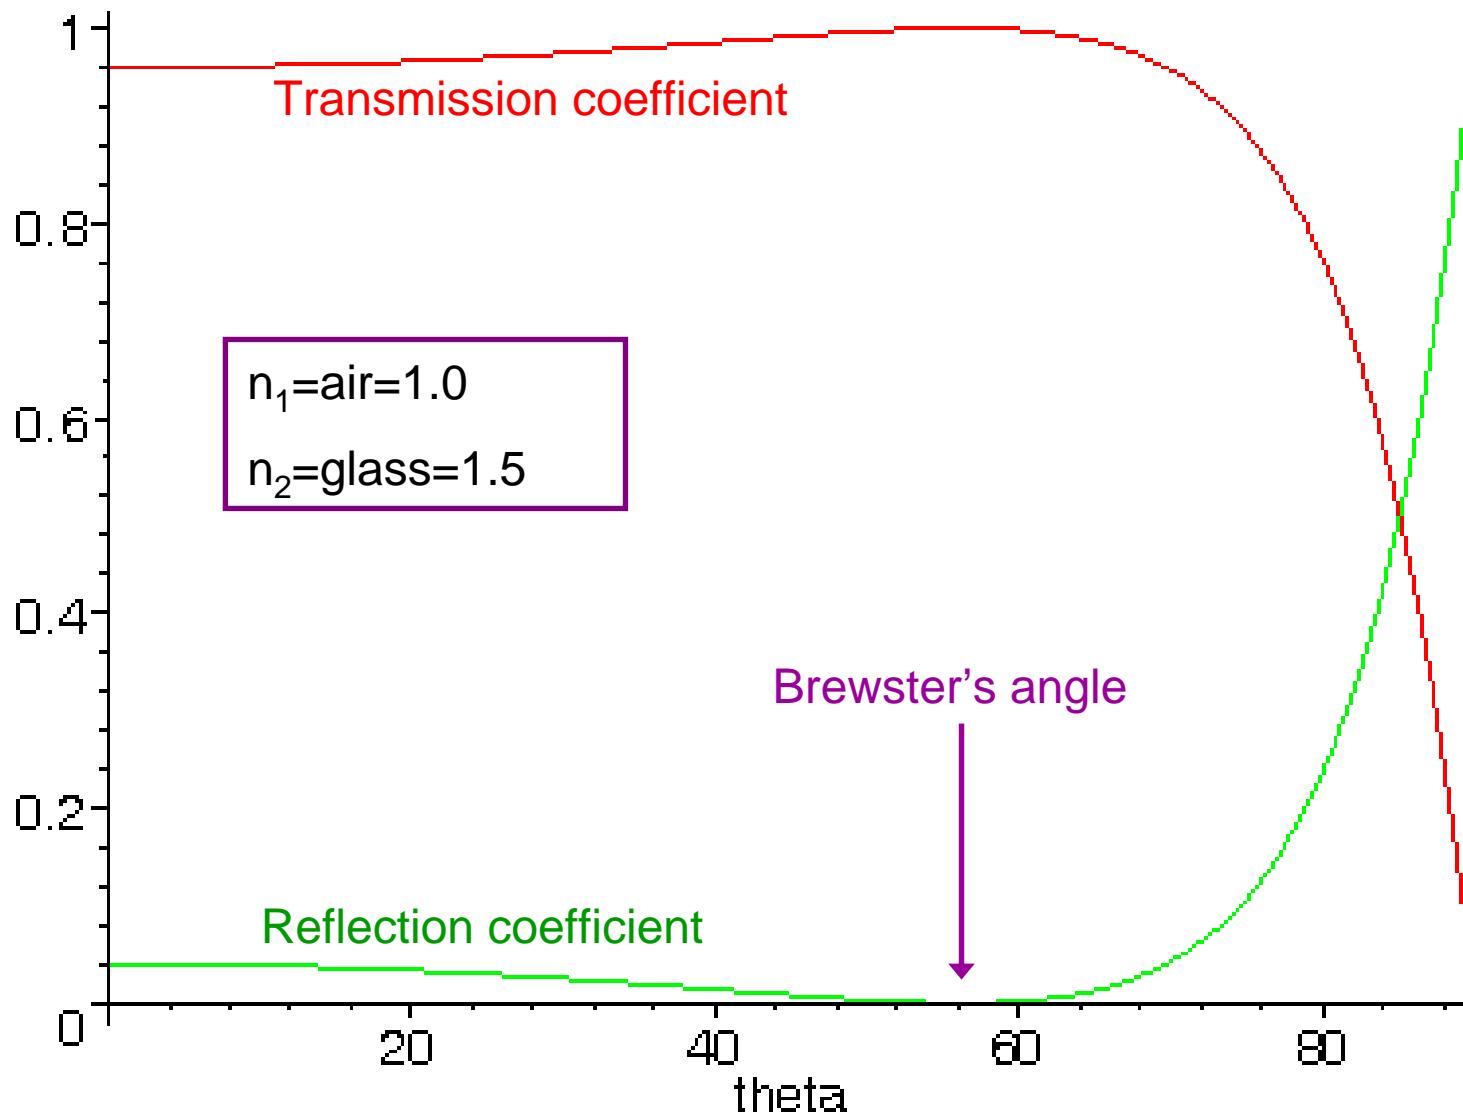

P-polarized light on Glass, $n_2=1.5$

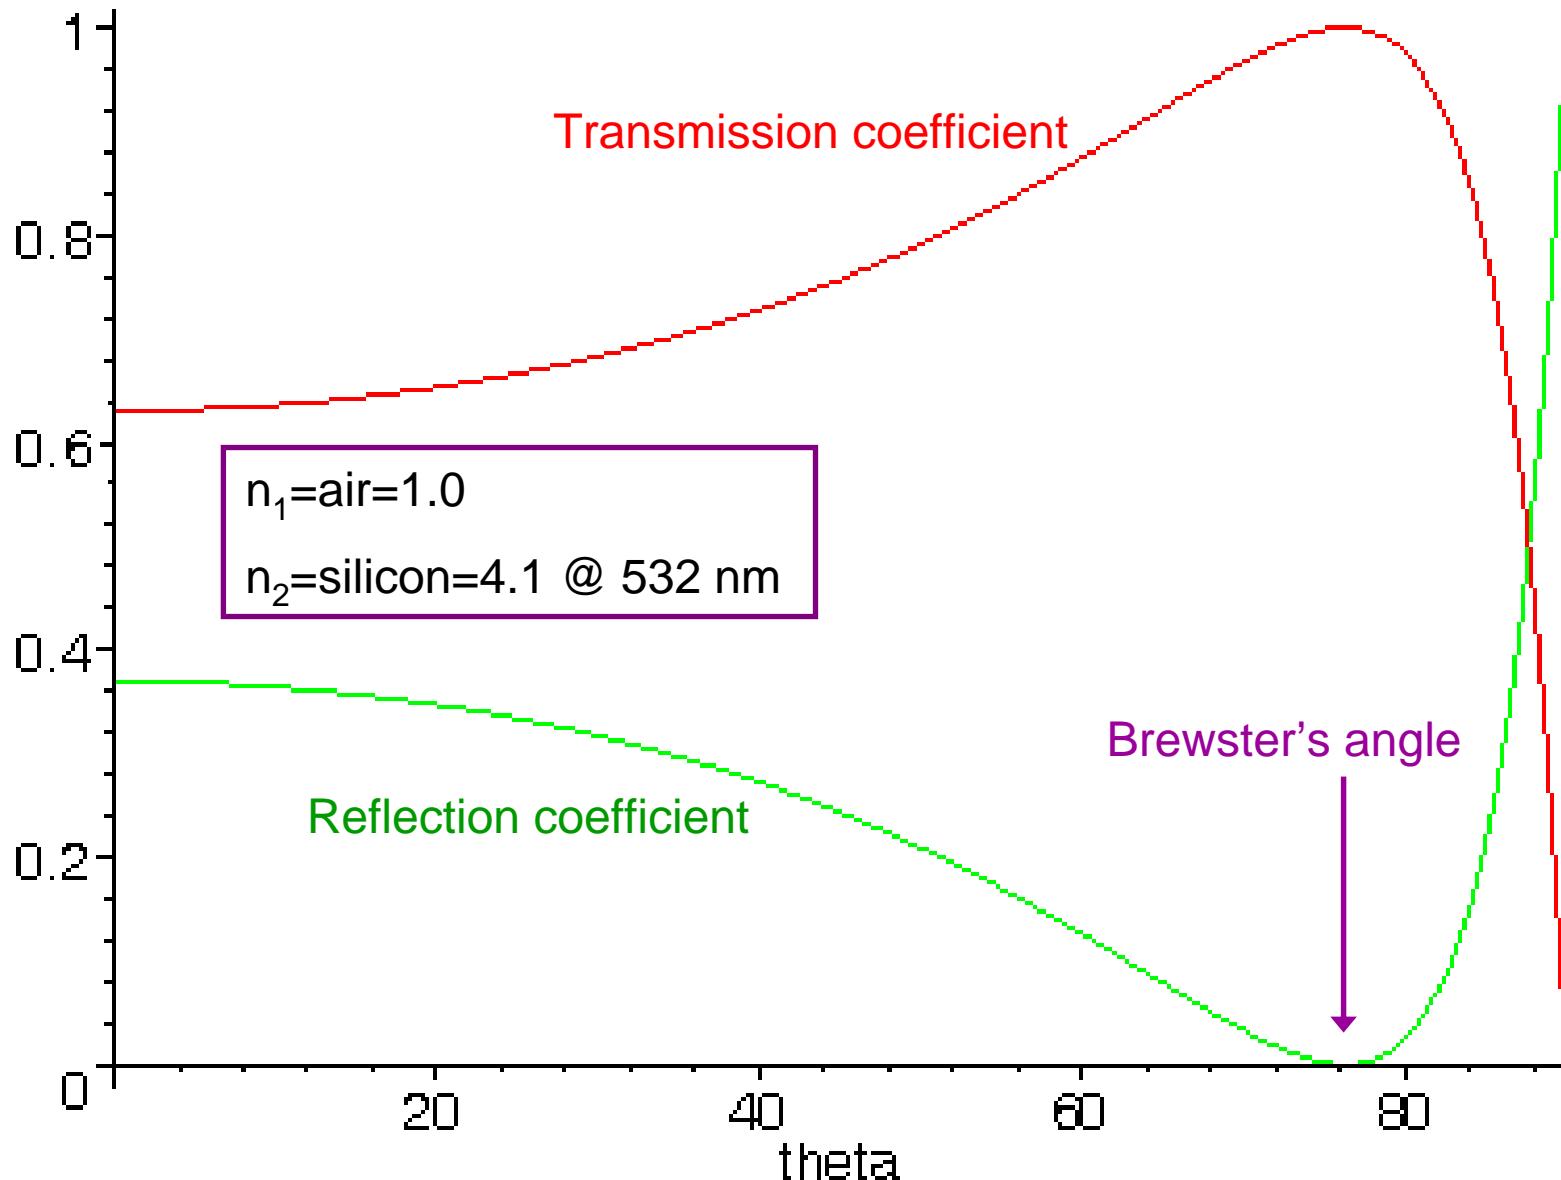

P-polarized light on Glass, $n_2=1.5$

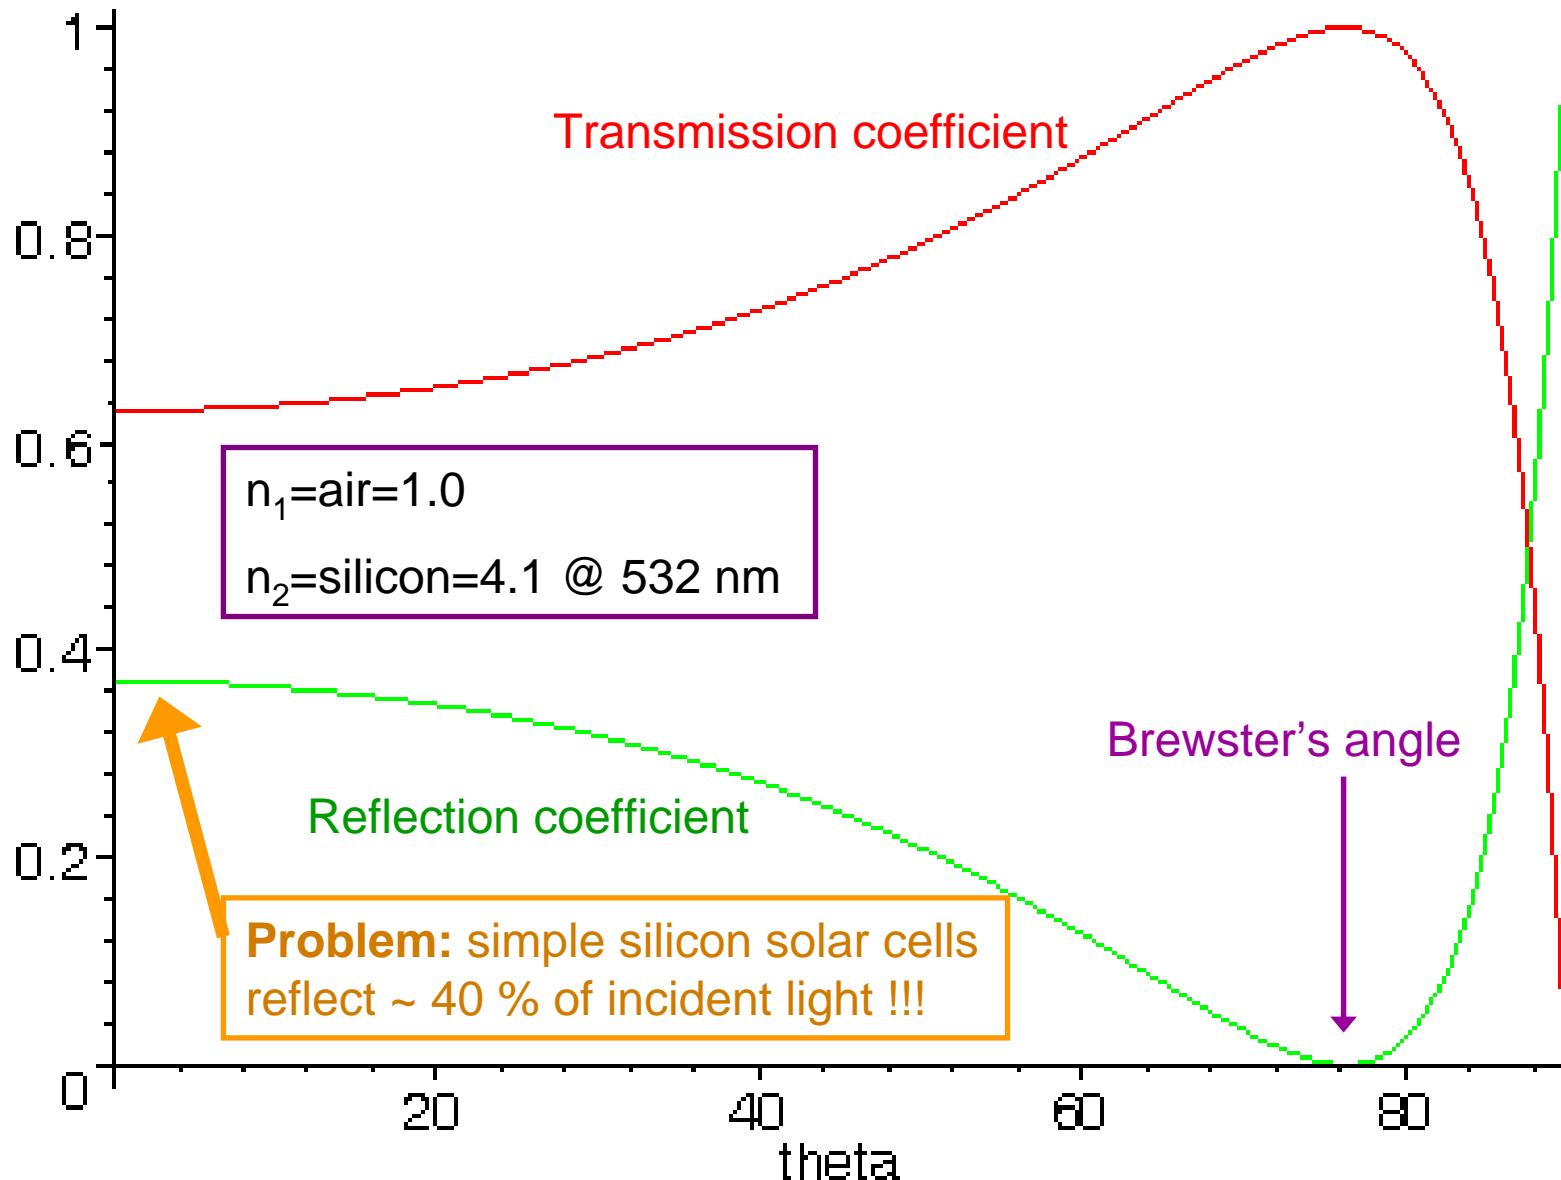

Glass: $n_2=1.5$

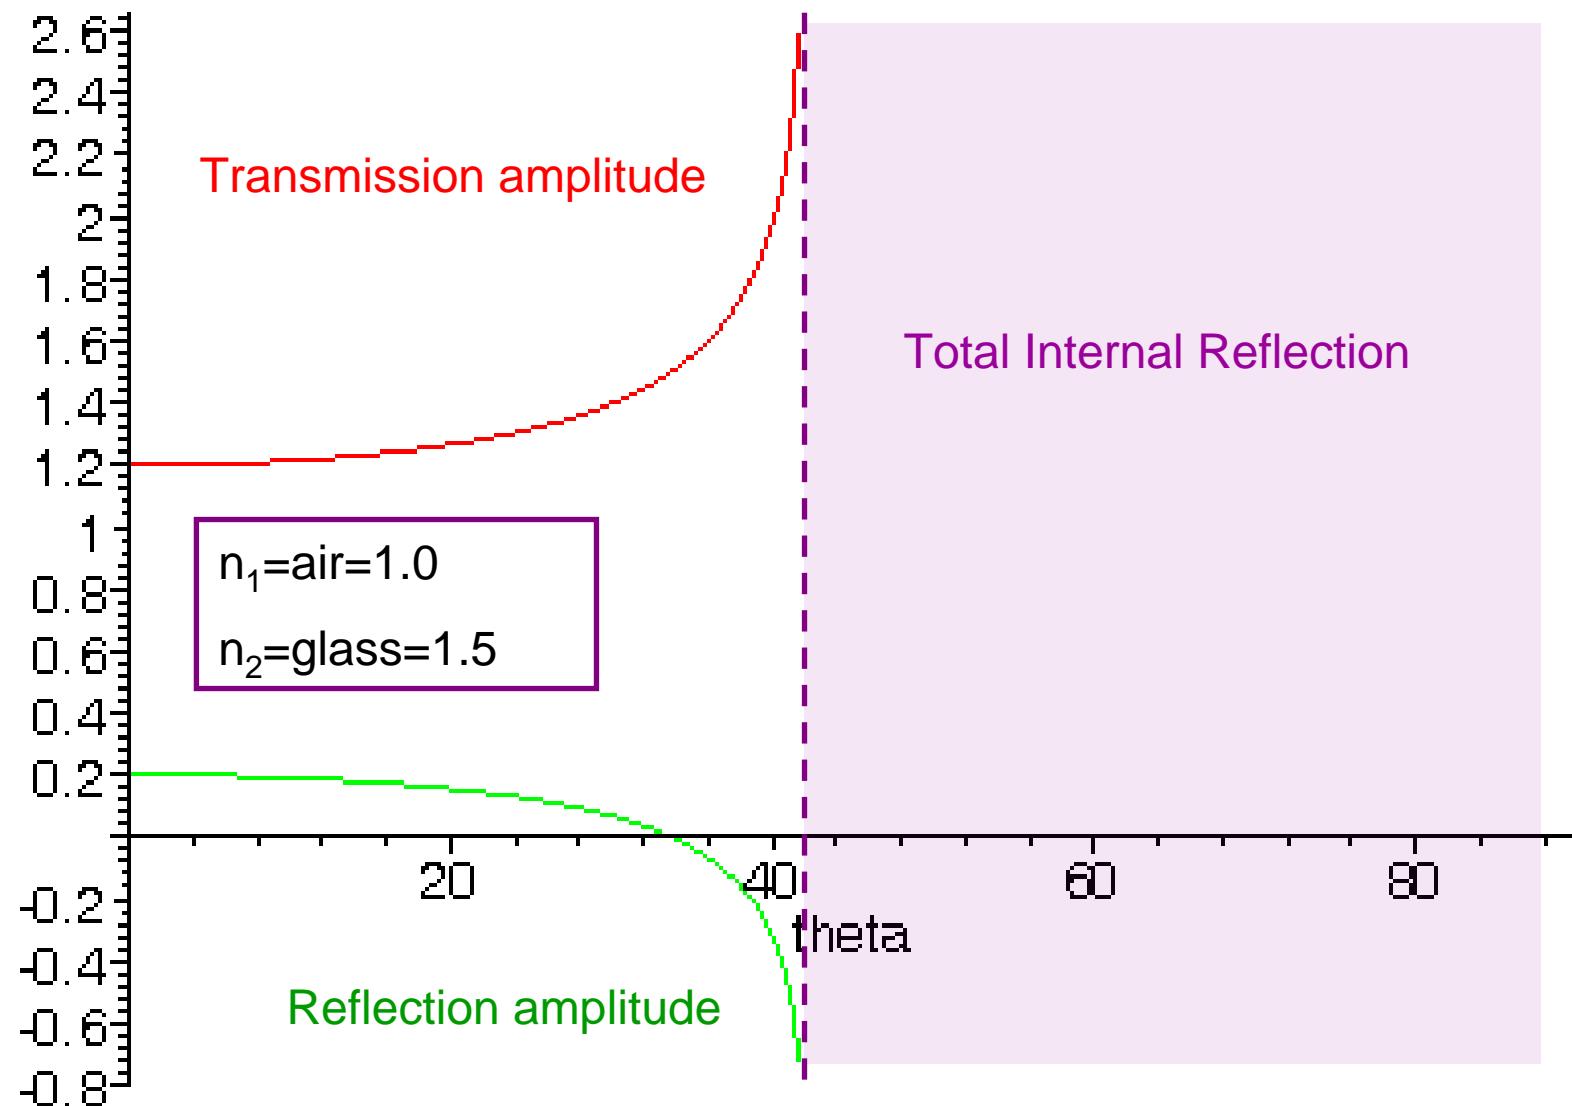

Silicon: $n_2=4.1$

Silicon: $n_2=4.1$

Total internal reflection: Glass: $n_2=1.5$

Total internal reflection: Glass: $n_2=1.5$
