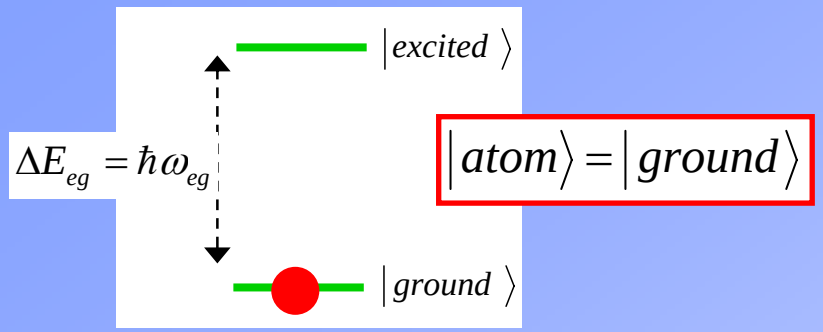
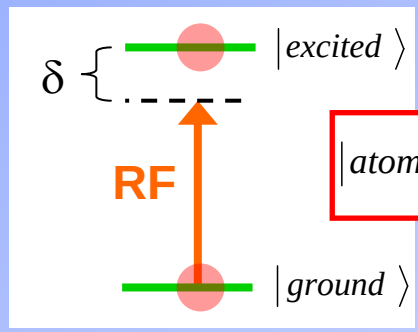
Atomic Clock: basic operation

Step 1: Initialization



$$|atom\rangle = |ground\rangle$$

Step 2: Rabi $\pi/2$ pulse

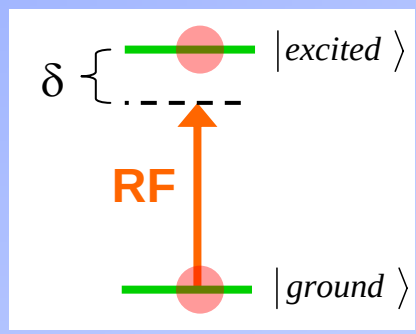


$$|atom\rangle = \frac{1}{\sqrt{2}}\left(|ground\rangle - i|excited\rangle\right)$$

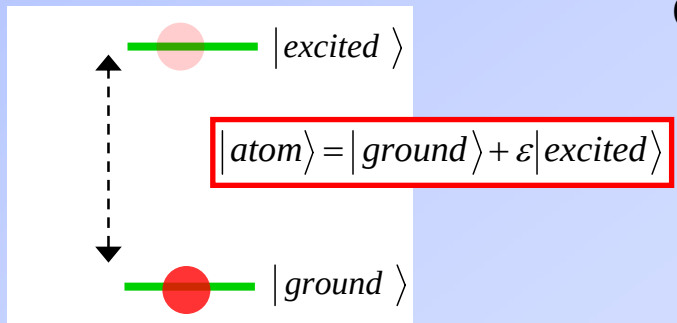
Step 3: wait a time T (determined by electronic clock)

$$|atom(t=T)\rangle = \frac{1}{\sqrt{2}}\left(|ground\rangle - ie^{-i\omega_{eg}T}|excited\rangle\right)$$

Step 4: Rabi $\pi/2$ pulse again



Step 5: Readout



Step 6:
Correct electronic clock

$$\delta \to 0$$
