Laser Dipole traps

Quasi-static Limit:

- 1 W of power.
- focused down to 100 μm.

Laser Dipole traps

Quasi-static Limit:

- 1 W of power.
- focused down to 100 μm.

Atom: ^{87}Rb

DC polarizability: $\alpha = h \cdot 0.08\ Hz/(\frac{V}{cm})^2$

Laser Dipole traps

Quasi-static Limit:

- 1 W of power.
- focused down to 100 μm.

Atom: ^{87}Rb

DC polarizability: $\alpha = h \cdot 0.08\ Hz/(\frac{V}{cm})^2$

$\Rightarrow$ Intensity ~ 10^8 W/m^2, Electric field ~ 3×10^3 V/cm

Laser Dipole traps

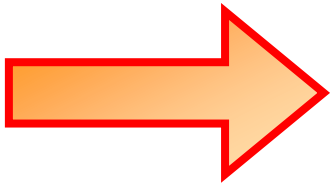
Quasi-static Limit:

- 1 W of power.
- focused down to 100 μm.

Atom: ^{87}Rb

DC polarizability: $\alpha = h \cdot 0.08\ Hz/(\frac{V}{cm})^2$

$\Rightarrow$ Intensity ~ 10^8 W/m^2, Electric field ~ 3×10^3 V/cm



$U = -1.2 \times 10^{-28}$ J

~ 10 μK !!!

$\Rightarrow$ v ~ 3 cm/s

Laser Dipole traps

Quasi-static Limit:

- 1 W of power.
- focused down to 100 μm.

Atom: ^{87}Rb

DC polarizability: $\alpha = h \cdot 0.08\ Hz/(\frac{V}{cm})^2$

$\Rightarrow$ Intensity ~ 10^8 W/m^2, Electric field ~ 3×10^3 V/cm

$U = -1.2 \times 10^{-28}$ J

~ 10 μK !!!

$\Rightarrow$ v ~ 3 cm/s

Ultracold atoms are trapped by focused laser light !!!
